Yariv Menachem

Backend & AI Engineer · .NET · Python · Java · LLM Agents

Rishon LeZion | +972-52-459-4598 | yariv220895@gmail.com | linkedin.com/in/YarivMen | github.com/yariv245

SUMMARY

Backend engineer who builds with AI: 5+ years of production services in C#/.NET, Python and Java, multi-agent development workflows, and LLM-powered products shipped end to end.

SKILLS

Languages	C#, Java, Python, SQL, JavaScript
Backend	.NET 8+ / Framework, Spring Boot, Hibernate / JPA, FastAPI, microservices, event-driven / saga
Data	PostgreSQL, MSSQL, Redis, Neo4j, Elasticsearch, Qdrant
Cloud & DevOps	Azure (Service Bus), AWS (EC2, S3, SQS), Docker, Jenkins, CI/CD, Pytest
AI	Multi-agent (Copilot agents, CrewAI, LangChain), Claude Code, MCP, RAG, Ollama, OpenAI / Claude / Gemini

EXPERIENCE

Software Developer · ISSTA — Oct 2025 – Present

- Cut flight and hotel checkout failures by more than half (18% → 9%, 11% → 4%) through **root cause analysis** of **C#/.NET** booking services.
- Built a **multi-agent AI** development workflow (plan → implement → review → PR) with approval gates, **Beads** task tracking and persistent context.
- Designed self-service hotel cancellation as an **event-driven saga** on **Azure Service Bus**, with partial-failure handling and **server-side validation**, reducing support load.

Freelance Backend & AI Developer — Jan 2025 – Oct 2025

- Architected a hybrid Bill of Materials backend with **FastAPI**, **PostgreSQL** and **Neo4j**, modeling multi-level component hierarchies as a **graph** alongside relational product data.
- Engineered an end-to-end **RAG** document Q&A pipeline: PDF chunking, **Hugging Face** embeddings, **Qdrant** vector search and answers generated with the **OpenAI API**.

Backend Developer · Home365 — Sep 2021 – Sep 2024

- Developed core **REST microservices** in **Java**, **Spring Boot** and **Hibernate/JPA** for a property-management platform managing up to 7,000 properties.
- Built a data pipeline (**ETL**) that extracts, transforms and securely transfers transaction data to the bank's **SFTP** servers in a bank-compliant **CSV** format.
- Designed a PDF generation service with **Apache PDFBox** and **AWS S3** that fills templates with dynamic content and images.

Automation Developer · DBmaestro — Nov 2019 – Mar 2020

- Developed automated UI and API test suites in **Python** (**Pytest**, **Selenium**) running in **Jenkins CI**.

PROJECTS

Sidekix · 3D multiplayer creature-companion web game

Explore with a creature companion, catch wild creatures and battle other players live. Built with **Claude Code**: **React** / **Three.js**, **Node.js WebSocket** multiplayer, **MongoDB**, an **Instagram** DM bot and AI agents that create new creatures (**Meshy**, **Blender**).

Milhush · Daily Hebrew word-puzzle app

Daily Hebrew word puzzles: Wordle-style, a word-trail grid and a honeycomb word game (Hive). **Flutter** app (Android and **PWA**) on **FastAPI** / **PostgreSQL**, with offline play through a compressed dictionary **Trie** and a **backtracking** generator that fills every board.

JobSeekerTG · Job-search bot and web app

Telegram bot and web app that scrape job boards and push new matches; **Gemini** tailors the CV per job with a skill-match score, **PII anonymization** and a check for invented skills.

Stock AI Analysis · Multi-agent market analysis

CrewAI agents (researcher → analyst → strategist) on local **Ollama** LLMs with **tool calling**, hallucination checks and deterministic risk metrics; **FastAPI**, **PostgreSQL**, **Telegram** bot.

EDUCATION

B.Sc. Computer Science · College of Management Academic Studies — 2018 – 2021
